Calculate color values automatically

The dedicated software Color analyzer app is ideal for measuring color values in a sample. By calculating the average color value of a sample the operator can get all identified color values in the sample displayed on a color indicating graph. When furthermore showing previous analysis results, comparison of samples becomes easy.

How to

Perform objective analyses and compare samples

Perform objective analyses

✓ **Calculate color values automatically**
Let the app perform automatic and objective analyses every time.

✓ **Save template to use the same settings**
Once you have found settings suitable for your object, save them as a template, then recall them for future use to ensure consistency.

Compare samples

✓ **Easily compare samples**
The app stores previous analysis results for easy comparison between samples. Delete previous analyses by using the Reset data button.

✓ **Select an on-screen object for detailed information**
Want more info on one particular object? Ask the information panel to display detailed information on this object only.
