Use visual guides in inspection

Photos of seed types to help you sort your batch or inert matters to know what to look out for during inspection. You can create any photo you want.

With the images as a visual guide, there's fewer human mistakes. It's great

Results

Be consistent and reduce preparation time

When pairing your inspection graphic with a preset, you'll use the same settings again and again. Letting the microscope adjust to the settings saved in the preset is also much faster than doing it manually.

How to

Create and link to microscope settings

Create your photo

The app accepts PNG photos as inspection graphics

We recommend using free image editor programs like GIMP or Pixlr E that can create PNG files with a transparent background

Create any and as many 1920x1080 pixel photos as you want

Link it to your settings

Select a photo and adjust microscope and light settings as needed

Save your photo and settings as preset

Recall a preset and the microscope automatically displays the photo and changes microscope settings
